UrjaGram

Sustainable Development Framework

Climate Resilience · Energy Transition · NetZero 2047

Amar Nath
CEO & Founder · UrjaGram Innovations Pvt Ltd, Gurugram – 122002, Haryana

The Problem

🌡️ Climate Emergency

2024 was the first single year above 1.5°C (1.55°C, WMO). 2015–2025 were the 11 hottest years on record.

17%

GDP loss in developing Asia & Pacific by 2070 under a high-emissions scenario (ADB, 2024)

⚡ Energy Transition Gap

India energy consumption one third of the world average; 925mn rural Indians consume even less.

56%

Of rural households still cook on solid fuels — LPG access exists, usage does not (NFHS-5)

💧 Resource Stress

18% of global population, only 4% of freshwater. Food, water and health systems under strain.

86%

Of farm holdings are small & marginal — under 2 ha, but only 47% of operated area (Ag Census 2015-16)

Sources: ADB (2024) · WMO (2025) · NFHS-5 · Agriculture Census 2015-16 · MNRE PM Surya Ghar (2026) · World Bank / UN

Why Existing Solutions Fall Short

Fragmented

Schemes and programmes operate in silos — energy, water, health, agriculture rarely addressed together.

Top-Down

Solutions rarely co-designed and co-created with local communities or adapted to local context.

Short-Term

Project cycles of 1–3 years cannot address challenges that are multi-decade and structural.

Not Scalable

Pilots rarely standardised or productised — each village starts from scratch.

No Platform

No integrated technology layer to coordinate, monitor, and learn across villages and blocks.

The result: villages remain vulnerable, resources wasted, and potential untapped.

UrjaGram Sustainable Development Framework

Climate adaptation & energy transition at village scale — integrated, AI-coordinated, and built to scale.

A | ADAPTATION

- Disaster Resilience & Management
- Health Security
- Water Cycle Management
- Food & Agriculture Security

→ *Villages become climate-resilient*

B | MITIGATION

- Energy Transition — Solar, Bioenergy
- Nature-based Solutions & Agroforestry
- Carbon & Green Credit Generation
- GHG Mapping & NetZero Roadmap

→ *GHG emissions reduced, credits generated*

Both pillars are linked into a single Gram Panchayat Integrated Investment Plan (GP-IIP) — projectised, financed, and monitored.

DEVTech — Distributed Intelligence

DEVTech

AI-driven project development and management platform — for development + climate change + energy transition

Coordinates projects, finances, and outcomes across every village.

Without DEVTech, USDF is a framework.
With DEVTech, USDF is a scalable product.

🏠 Digital Twin

Virtual model of each village — simulate climate scenarios & interventions

🤖 AI Pathways

Custom development roadmaps generated for each Gram Panchayat

📊 MRV Dashboard

Measure, Report, Verify — outcomes, SDG tracking, carbon credits

🔗 Coordination

Links SHGs, students, interns, government and finance in one platform

Human Capital Engine

USDF is delivered by three complementary groups — creating a lean, local, self-sustaining model.

Self-Help Groups (SHGs)

Field Delivery

Community-designed and driven execution of adaptation and mitigation projects on the ground — water, food, energy, livelihoods.

School Students

Future Pipeline

Applied Education for awareness, data collection, local champions. Villages that can sustain and expand the programme across generations.

Tech Interns

Leadership

Leadership and management leveraging DEVTech platform, Digital Twin, MRV and project development. Lean, high-impact, cost-effective.

All three groups are coordinated and enabled through the DEVTech AI Platform

The Market Opportunity

~650,000

Villages across India

addressable at scale

~260,000

Gram Panchayats

primary delivery unit

Massive

Climate Finance gap

largely untapped at village level

Demand Drivers

- 🏛️ Government: NAPCC, Mission LiFE, SDG convergence, NetZero 2047 commitments
- 🏢 Corporate: BRSR mandates, TCFD/TNFD reporting, supply chain resilience, CBAM compliance
- 🌍 International: Climate finance, UNFCCC, ADB, bilateral development agencies

Business & Finance Model

UrjaGram Innovations — Policy aggregator & system-support enterprise. Service provider for USDF implementation across Gram Panchayats and Development Blocks.

Blended Finance Sources

- 🏛️ Government budgets & scheme convergence
- 🌍 International climate finance & grants
- 🏢 Corporate BRSR & supply-chain mandates
- 🌱 Carbon & green credit revenues
- 📈 Debt, equity & development finance
- 🤲 NGOs, foundations & crowdfunding

Revenue Streams → Service fees · Carbon & green credits · Platform licensing · Data & MRV services

Proof of Concept — FY 2026–27

Energy and Water are the active PoCs — run on VET-OS and AquaGramOS. Food shares AquaGramOS; Nature-Based Solutions pilots in Maharashtra.

Energy System
Haryana · VET-OS
ACTIVE PoC

Water System
Punjab · AquaGramOS
ACTIVE PoC

Food System
AquaGramOS
In development

Nature-Based
Maharashtra
In development

Platform layer

· one operating system per set of village systems

VET-OS Energy transition	**Energy · Haryana (Active) — PM Surya Ghar · NECP**
AquaGramOS Water & food	**Water & Food · Punjab — water-cycle management · food production**

Q1–Q2 FY27 PoC Launch
Select Gram Panchayats. Deploy USDF energy & water modules.

Q3–Q4 FY27 Implementation
SHGs, students and interns activated. DEVTech platform live.

Q1 FY28 Results & Scale
Measure outcomes. Prepare replication model for next block.

Targets for the Community Block

A cluster of villages developed together — the Block becomes the unit of development and scale.

01

Climate-Resilient Block

Disaster, heat, water & health resilience — indicators set, tracked and improved.

02

Block-GDP Growth

Local economy expanded; green jobs and village enterprises created.

03

SDG Achievement

Convergence and measurable progress across priority Sustainable Development Goals.

04

Net-Zero GHG

Household and community emissions driven to net-zero.

Delivered through a 15-Year Block Integrated Investment Plan (B-IIP)

All four targets projectised, financed and monitored under one plan — turning village PoCs into block-scale delivery.

Scale-Up Model

Standardise the PoC → productise → replicate across blocks, districts and states.

01

Pilot GP

Gram Panchayats selected. Key modules of USDF deployed. All three human capital groups activated.

02

Standardise

Document process. Create replicable templates. Knowledge products built.

03

Block (B-IIP)

Block Integrated Investment Plan. Whole-of-society model. Block subsidiary formed.

04

District & State

Technology-enabled replication. DEVTech scales coordination.

05

National

Product licensed across states. UrjaGram as platform company.

We Are Looking for Early Partners

USDF is ready to be tested. We are inviting three types of partners to co-create the PoC in FY 2026–27.

🏛️ State / Central Government

Ask: Policy integration and Gram Panchayat access

Value: Achieve SDGs, NAPCC targets and NetZero 2047 commitments at village scale — with measurable outcomes.

🌍 Climate Finance & Investors

Ask: Seed funding for PoC and platform development

Value: First-mover position in a scalable, bankable model addressing India's largest climate finance gap.

🤝 NGOs & Development Agencies

Ask: Community mobilisation and ground partnerships

Value: Amplify existing programmes with an integrated framework — structured, measurable, replicable.

Let's build this together.

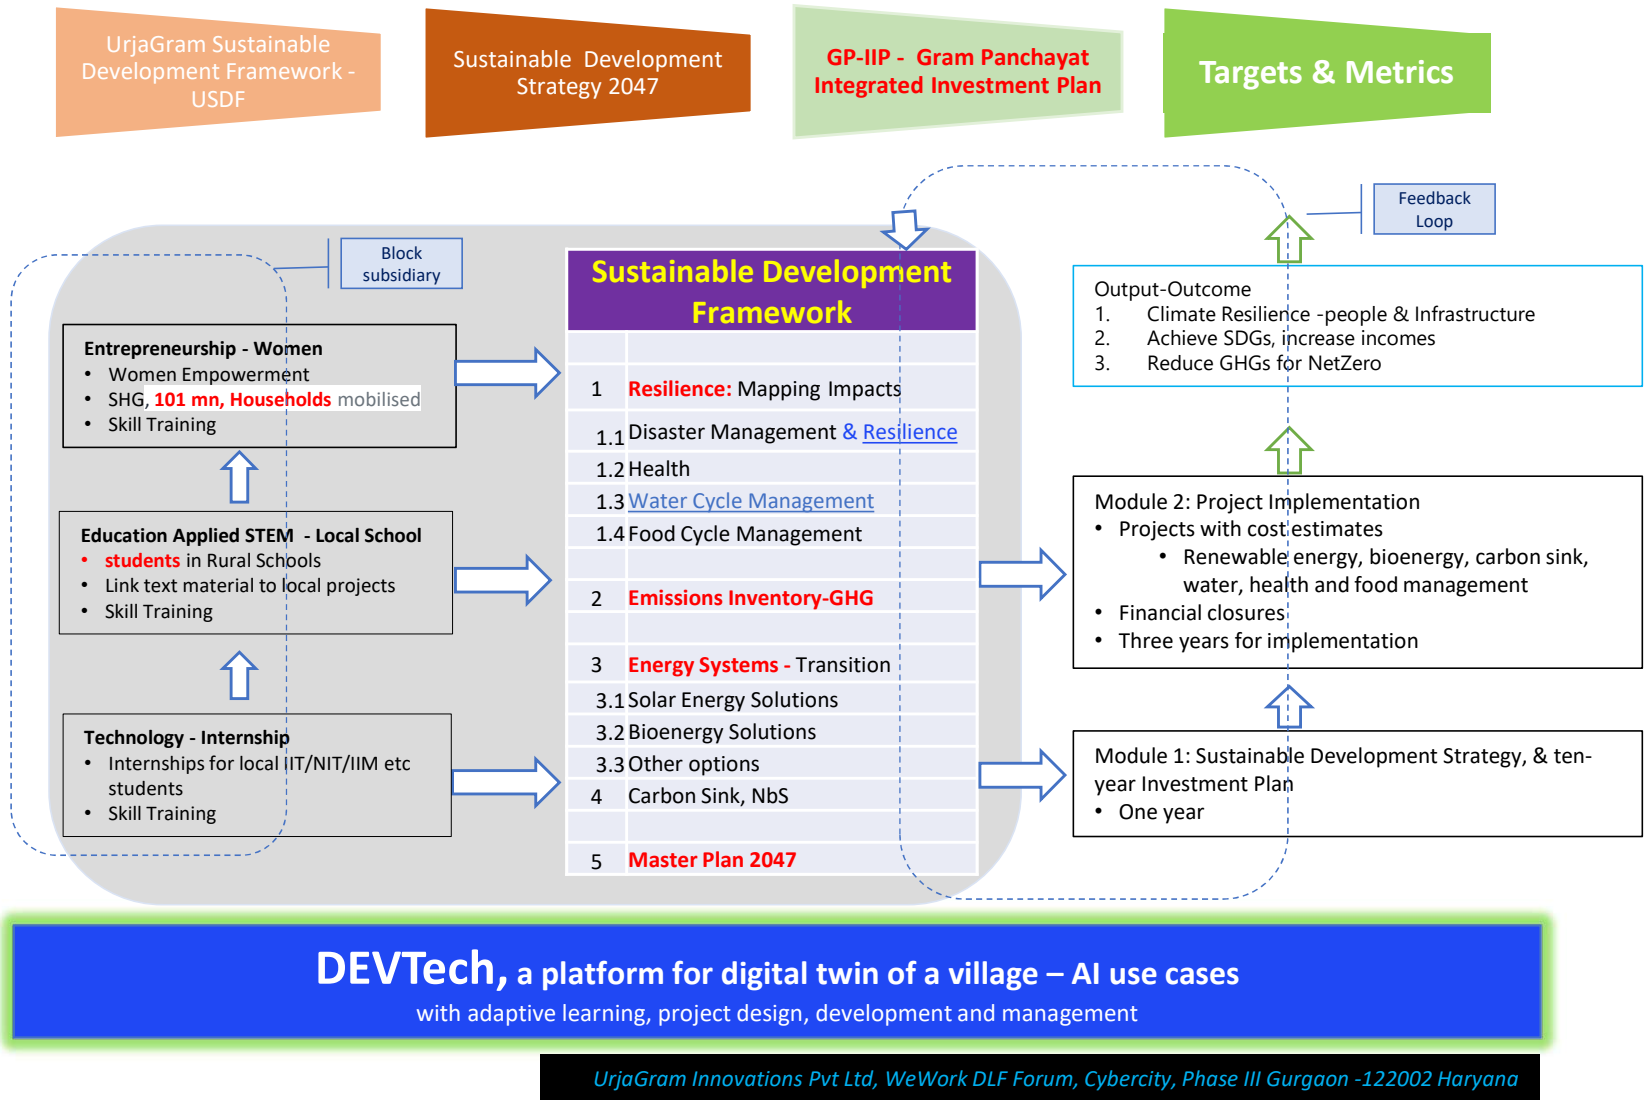

Empowered Future

Climate-Resilient Villages · Energy Transition · NetZero India 2047
